

Solution beyond Writing...

Pentaztic is a complete business solution right at the tip of your hand that digitally captures handwritten data without encoding, scanning or faxing.

It combines the portability and acceptance of traditional pen and paper with a computer's ability to store, share and act upon collected information.

Technology Uses an Age-Old Method....

- ✓ Pentaztic pen has a tiny built-in camera and memory device that records pen strokes and stores content.
- ✓ Transmits stored data wired or wirelessly through USB or Bluetooth
- ✓ Pentaztic features a pattern printed paper which the pen reads and remembers. Using a unique software process, forms are reproduced to match your existing forms.
- ✓ Customized forms accept handwriting, sketches, codes, control boxes as well as signature capture.

write

Write on a pattern printed paper

convert

Convert written data with bundled software

save

Store, organize and manage
